FOTOBA INTERNATIONAL

DIGITAL PRINT FINISHING SOLUTIONS

PRINT FINISHING SOLUTIONS FROM FOTOBA

The Digitrim features the ability to sense **cut marks** placed between multiple digital images, printed or exposed simultaneously on single pages or rolls of digital media.

Most printing devices have the capability to create Cut Marks automatically. In case this option is not available, each Digitrim is supplied with **TrimManager**, the Rip software that nests, clones and paginates automatically different images on the same web. You can download it from our web site <http://www.fotoba.com>.

Regardless of any slight misalignment, when paper is introduced into the Digitrim, the cutter will automatically re-align itself to the image side!

OPERATOR'S ERRORS FREE, EASY TO USE, QUICK AND ACCURATE CUTTING!

The units can handle numerous types of media with a maximum thickness of 0,5 mm (20mil) including Polycarbonates, Laminates and Encapsulated media, Photo Paper, Vinyl, Sticky Back Vinyl, PVC, Inkjet and Electrostatic Plotters media, Graphic Arts Film, Duratrans and much more.

Features:

- Fully Automatic
- Accuracy to .1mm
- Auto Trim function
- Easy to use self starting cut cycle
- Self sharpening rotary blades
- Programmable double cut
- Max cutting thickness up to 0.5mm/0,02in
- Five channels to store cut mark data
